Photography comes first.

Tools designed around the everyday needs of wildlife photographers.

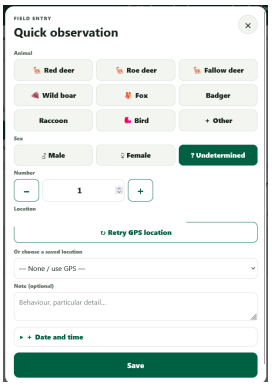
ONE PASSION, THREE APPROACHES

Record an encounter without wasting time. Review photographs to study details. Plan a hide session or coordinate group outings. Each Highpixel application has a distinct purpose.

Your phone is your companion in the field; your PC provides the space for reviewing, analysing and comparing photographs.

Three ways to experience the field

Three distinct applications, united by a goal: organising and documenting wildlife observations.



WILDLIFE

Your personal journal

Observations, animals, locations, photographs and comparisons.

WILDLIFE TEAMS

Working together

Hides, bookings, observations and shared photographs.

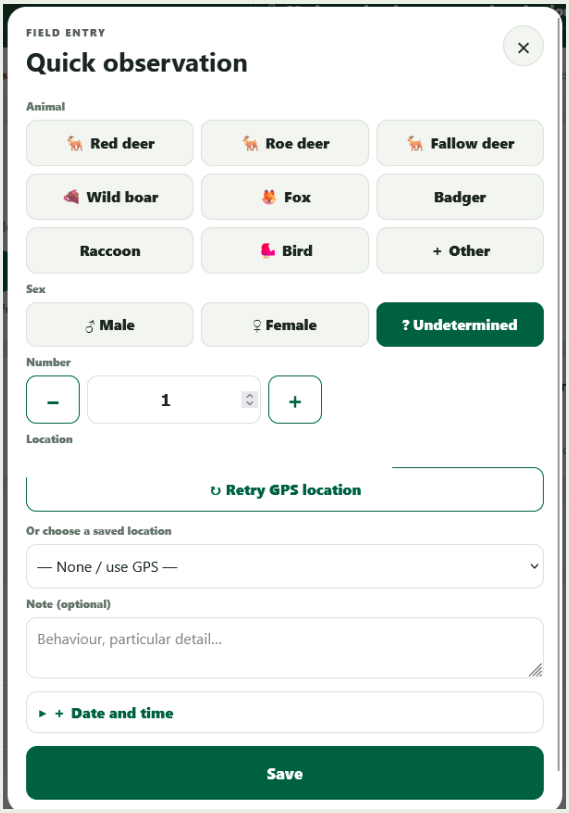
LIGHT

Planning ahead

Zones, times, wind and light to plan a session.

The essentials in the field.

Quick entry designed for wildlife photography on your phone.



QUICK OBSERVATION

Record the species, date and useful details during an outing, then review the observation and images later.

01 Capture

Direct access to key details.

02 Save

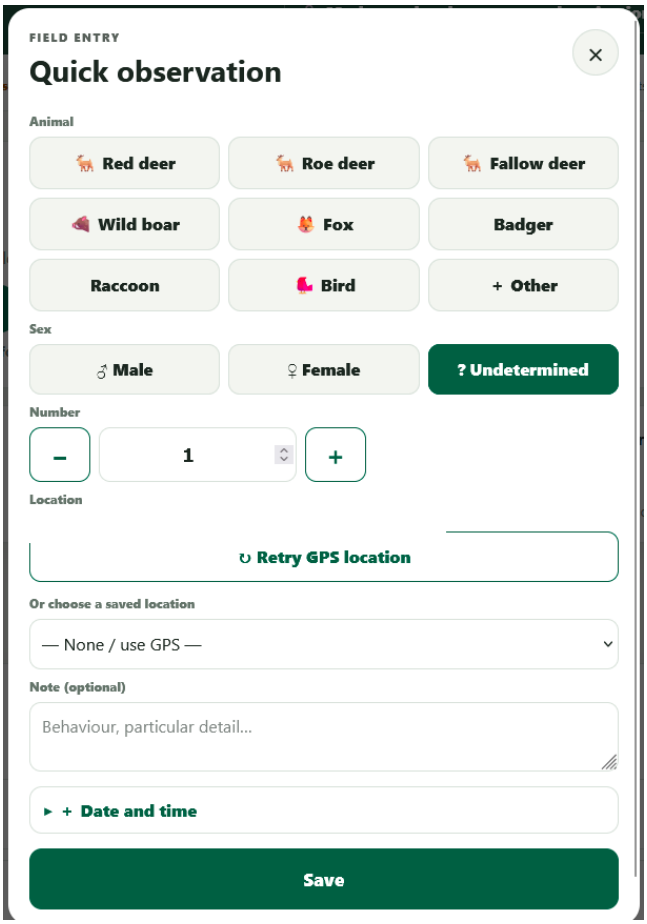
A journal to revisit observations.

03 Expand

Add further details later on your PC.

Your journal in your pocket.

A simple workflow for recording wildlife encounters on your phone.



01 Select a species

Choose an animal from the quick-access buttons.

02 Record the encounter

Enter the number of animals and any useful details.

03 Add context

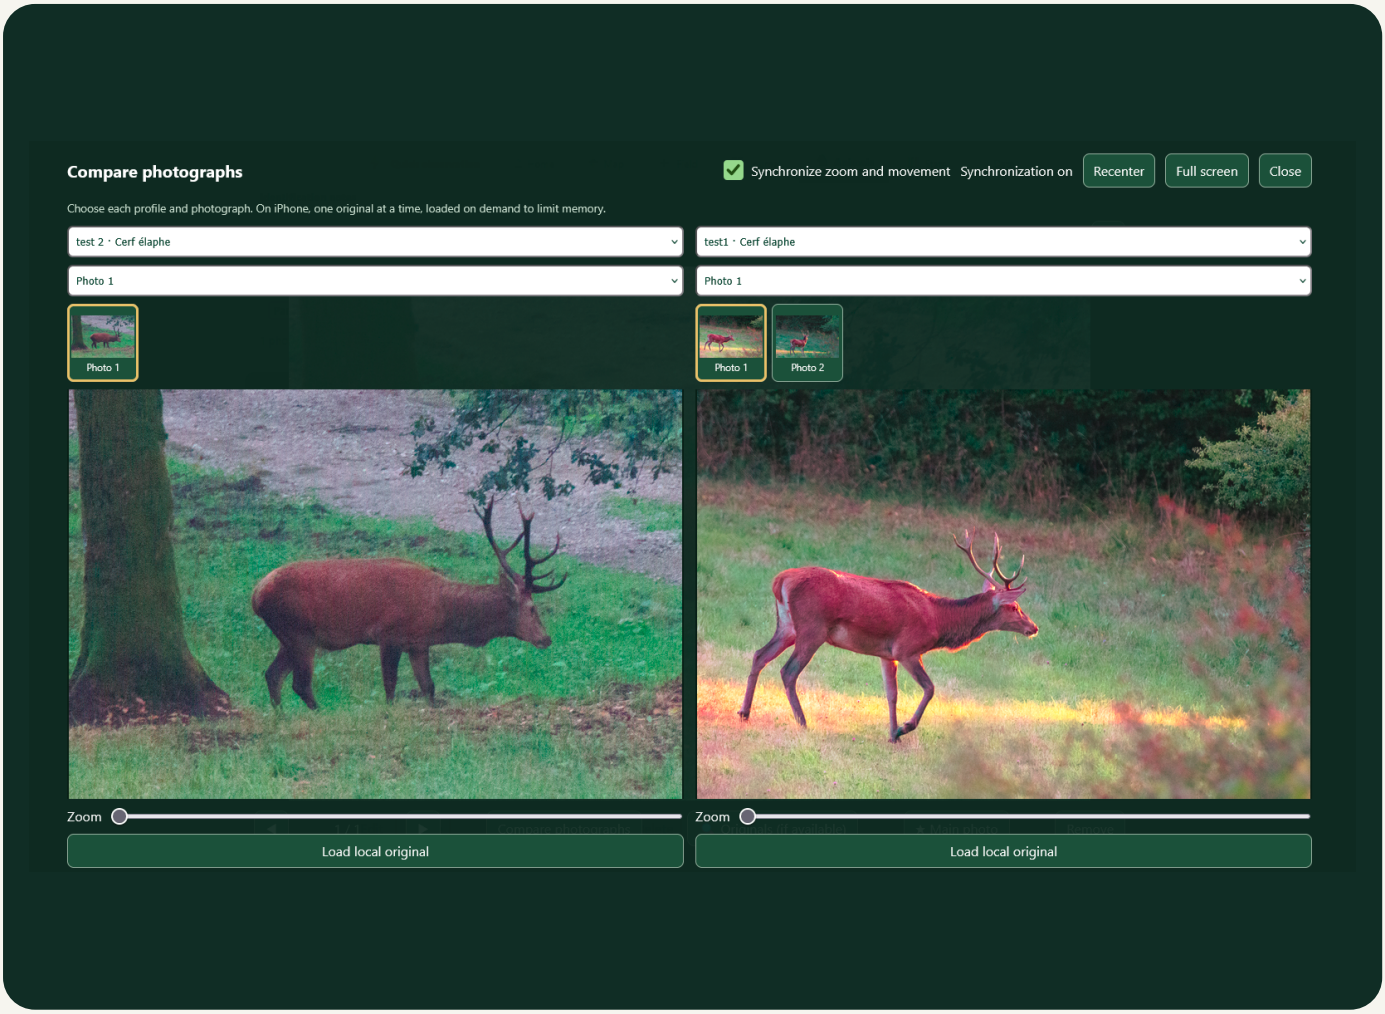
Include a location and an optional field note.

04 Save

Keep the observation for later review.

Compare to recognise.

Two images side by side, with independent or synchronised zoom and panning.



REAL EXAMPLE: PHOTO COMPARISON

01 Study details

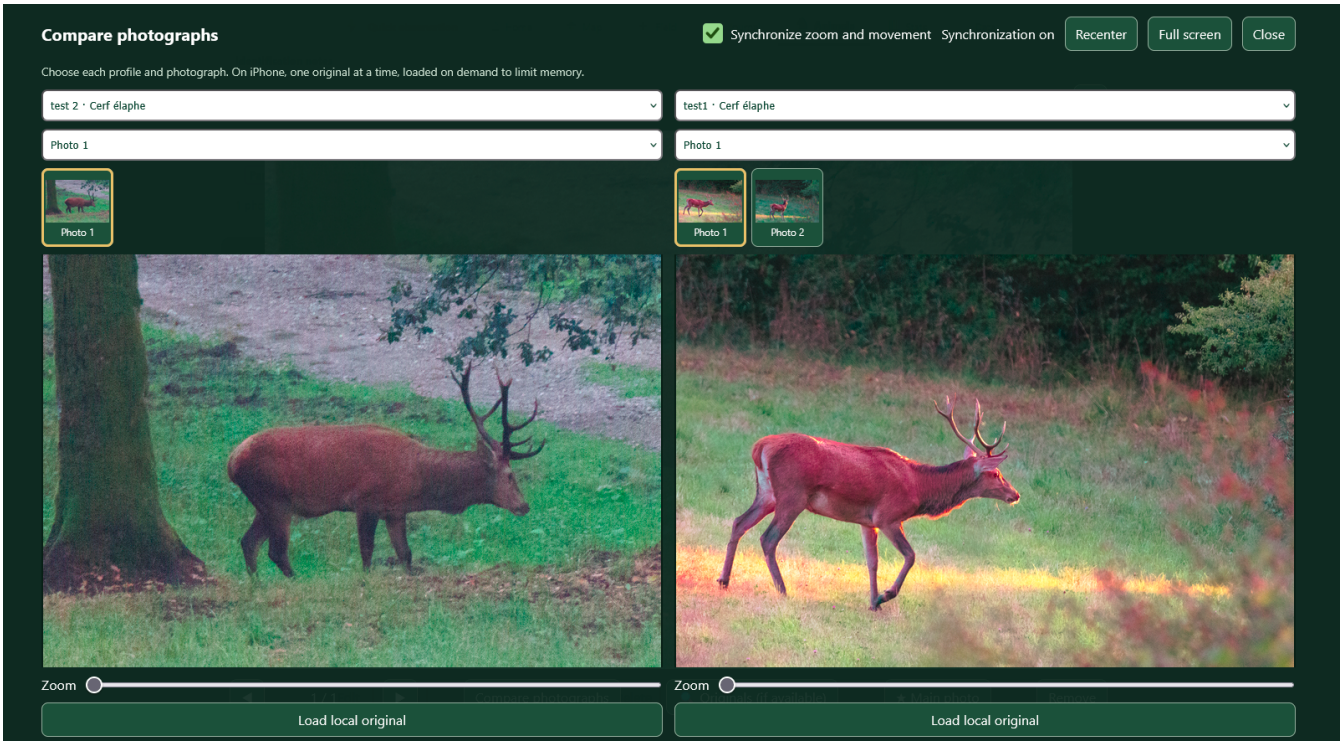
Antlers, shape, posture and visible markings.

02 Inspect originals

Inspect finer details when original files are available.

Back home, take a closer look.

Your PC makes it easier to browse your journal and study photographs in depth.



COMPARE PHOTOS, RECOGNISE INDIVIDUAL ANIMALS

Examine two different photographs side by side. Synchronised zoom and panning help you compare antlers, body shape and other visible details.

In the field: speed. At home: detailed analysis and comparison of photographs.

Share the field.

A shared workspace for photographers who organise group outings.

A GROUP APPROACH TO WILDLIFE PHOTOGRAPHY

Access a shared workspace, organise hides and bring together observations and photographs. Wildlife Teams is designed for collaborative fieldwork.

The separate “Affûts & Cerfs” area on the Highpixel website remains private.

One team, one shared journal.

From planning outings to discussing photographs.

01

Book a hide

Check time slots and coordinate attendance.

02

Observe together

Browse group observations and photographs.

03

Identify individuals

Compare photographs and discuss identifications.

04

Keep your own record

See which observations belong to each photographer.

Plan your hide session.

Explore conditions around an observation site.

LOCATION	Choose a hide and its zone
TIME	Explore times throughout the day
CONDITIONS	Consider wind, light, sun and moon

Light focuses on personal planning; it does not replace the Wildlife journal or the Teams workspace.

Try it. Make it yours!

An invitation to explore the applications and share your impressions.
